

Full Stack Business Website & Dashboard Development

1-Month Web Development Internship Project

Duration: 1 Month

Submission Deadline: 20-June-2026

Project Objective

The objective of this internship project is to provide interns with practical industry-level experience in modern web development by building a complete responsive web application from scratch. Interns will work on frontend design, backend integration, database handling, authentication, deployment, and project structuring while following professional development practices.

This project is designed to improve proficiency in:

- Frontend and Backend Development
- API Integration and Database Management
- UI/UX Understanding and Responsive Design
- Real-World Problem Solving and Deployment Knowledge

Technology Stack

The following technologies are authorized for the development of this platform:

Category	Approved Technologies
Frontend	HTML5, CSS3, Tailwind CSS, JavaScript, React.js / Next.js
Backend	Node.js, Express.js

Category	Approved Technologies
Database	MongoDB / Firebase
Tools	Git & GitHub, Postman, Vercel / Netlify / Render

Mandatory Features & Requirements

1. Core Systems

- **Authentication System:** Implementation of user signup, login, and logout functionalities with password encryption and JWT management.
- **API Development:** Development of REST APIs for authentication, CRUD operations, contact forms, and general data fetching.
- **Database Integration:** Secure storage for user data, contact form entries, dashboard content, and dynamic site information.

2. User Interface

- **Responsive Landing Page:** Must include a Hero Section, About Section, Services, Testimonials, Footer, and a functional Contact Form with modern animations.
- **Dashboard Panel:** An administrative area where the admin can manage records (Add/Edit/Delete), view inquiries, and manage users or content.
- **Design Standards:** The UI must be clean, modern, professional, mobile-friendly, and fast-loading.

Important Notice: This project must be developed individually. Cloned or copy-pasted projects are strictly prohibited and will result in disqualification.

3. Suggested Project Flow & Website Pages

Complete Website Flow

The application should follow a proper user journey from landing on the website to interacting with the dashboard and backend services.

1. Landing/Home Page

Purpose: The Home Page acts as the first impression of the platform and should clearly explain the business/service.

Sections & Functionalities:

- **Hero Section:**
 - Attractive heading
 - Call-to-action button
 - Background image/animation
 - “Get Started” or “Contact Us” button
- **About Section:**
 - Company introduction
 - Mission & vision
 - Brief business overview
- **Services Section:** Display services/products offered by the business.
 - *Example:* Web Development, App Development, Digital Marketing, UI/UX Design
- **Testimonials Section:**
 - Client reviews
 - Ratings
 - Success stories
- **Contact Section:**
 - Contact form
 - Email & phone details
 - Location map integration
- **Footer:**
 - Social media links
 - Quick navigation links
 - Copyright

2. Authentication Pages

A. Signup Page

- **Functionalities:** User Registration, Form Validation, Password Encryption, Store User Data in Database
- **Fields:** Name, Email, Password, Confirm Password

B. Login Page

- **Functionalities:** User Login, JWT/Auth Verification, Error Handling, Redirect after login

3. User Dashboard

Purpose: After login, users should access their personalized dashboard.

Functionalities:

- **Dashboard Overview:** Welcome message, User profile info, Statistics/cards
- **User Actions:** Depending on project type (View data, Submit forms, Track status, Update profile)
- **Dynamic Content:** Fetch data from backend APIs.

4. Admin Dashboard

Purpose: Admin panel to manage the entire platform.

Main Functionalities:

- **Manage Users:** View users, Delete users, Edit user information
- **Manage Content:** Add/Edit/Delete services, Update website content
- **Inquiry Management:** View contact form submissions, Respond to inquiries
- **Analytics Section (Optional):** Total users, Website visits, Inquiry statistics

5. Services Page

Purpose: Dedicated page explaining all services in detail.

Functionalities: Service cards, Detailed descriptions, Pricing section (optional), Inquiry buttons

6. Contact Page

Functionalities: Contact form, Backend form submission, Email integration (optional), Google Maps integration

Form Data: Store all inquiries in database.

7. Profile Page

Functionalities: Update profile, Change password, Upload profile image, View account information

8. Responsive Navigation System

Navbar Features: Responsive mobile menu, Authentication-based navigation, Smooth scrolling, Active page highlighting

9. Backend Functionalities

Required APIs:

- **Authentication APIs:** Register User, Login User, Logout User
- **CRUD APIs:** Create Data, Read Data, Update Data, Delete Data
- **Contact APIs:** Submit inquiry, Fetch inquiries

10. Database Collections/Tables

Suggested Database Structure:

- **Users Collection:** Stores Name, Email, Password, Role
- **Contact/Inquiries Collection:** Stores Name, Email, Message, Timestamp
- **Services Collection:** Stores Service Name, Description, Price, Image

11. Deployment Requirements

The final project must include:

- Fully working frontend
- Connected backend
- Database integration
- Live deployment
- Proper responsiveness

Optional Advanced Features

Interns can add extra features like:

- Dark/Light Mode
- Real-time Chat
- Notifications
- Search Functionality

- Image Uploads
- Payment Gateway
- Blog Section
- Admin Analytics
- Role-Based Access
- Email Verification
- OTP Authentication

Suggested Development Flow

Timeframe	Focus Areas
Week 1	UI Design, Landing Page, Authentication Setup
Week 2	Backend APIs, Database Integration, Dashboard Structure
Week 3	CRUD Operations, Admin Panel, Dynamic Data Handling
Week 4	Final Testing, Bug Fixes, Deployment, Documentation, Demo Video Preparation

Final Goal

The final application should feel like a real-world professional product with:

- Clean UI
- Proper backend architecture
- Smooth functionality
- Mobile responsiveness
- Secure authentication
- Organized code structure

Architecture & Deployment

- **Code Structure:** Maintain a clean folder structure with reusable components, proper naming conventions, and modular coding practices.
- **Environment Security:** Use environment variables for sensitive data.
- **Live Deployment:** The final project must be publicly accessible via hosting services such as Vercel, Netlify, or Render.

Submission Requirements

At the conclusion of the internship, the following must be submitted for evaluation:

1. **Live Project Link:** A URL to the hosted, working application.
2. **GitHub Repository:** Access to the complete source code with a history of proper commits.
3. **Project Report:** A document detailing the overview, features, tech stack, challenges faced, and key learnings.
4. **Demo Video:** A short walkthrough explaining features, workflow, and code structure.

Evaluation Criteria

Intern performance will be assessed based on:

- **Technical Quality:** Code organization, backend logic, and database handling.
- **User Experience:** UI/UX quality, responsiveness, and speed.
- **Execution:** Full completion of features, successful deployment, and innovation.
